

Footnotes

¹Copies of the complete 56-item attitude scale and checksheet may be obtained from Douglas Degelman.

²In order to be able to evaluate possible differences in response to the six-item BDIS when presented apart from the LOC, PP, and Ij scales, an additional 54 participants completed only the six-item BDIS and the checksheet. BDIS scores did not differ significantly as a function of whether the items were presented by themselves ($M = 32.76$) or embedded in the unified scale ($M = 32.92$), $t(111) = 0.822$, $p > .10$.
